The Chameleon is a new design concept for outdoor screens to fit the complete home or commercial installation.

With options including 'wire guide', 'side channel', 'blow-out restrictors', 'fabric tension system', with or without head box, the Chameleon can be almost anything it wants to be in the outdoor screen market.

It can be used in alfresco areas, windows or skylights for climate control.

- Unique Single Extrusion Head Box giving the Chameleon a sophisticated look.
- New two piece Side Channel for 'blind' fixing to either face or reveal.
- Exclusive Blow-Out Restrictor for side channels to hold screen in channel on those windy days.
- Optional PVC or Sunscreen fabric.
- Head Box, Side Channel and Bottom Rail are fabricated from extruded aluminium for long life and smooth straight lines, powder coated or anodised to suit existing colour schemes.

New additions to the system soon to be released:

- Fabric Tension System for 2 storey windows and skylight climate control.
- Narrow 2 piece side channel.
