

LLAZA SCREEN® 500

LLAZA SCREEN® 500

THE LATEST GENERATION OF VERTICAL AWNING

- It is an innovative solution for protecting buildings from the sun, wind and rain.
- Perfect for windows, balconies and existing structures.

Key Features

- This system's strength has been verified by wind tunnel testing.
- It is very strong and durable.
- It is perfect for exteriors as it prevents heat entering the home.
- It affords privacy and visual comfort.
- The fabric always stays in the side guides.
- It uses clippable guides so no screws or rivets are visible.
- Installation can be frontal, ceiling or between two walls.
- Due to the automatic clip support, installing the roller is practical and it does not need to be disassembled even if the fabric needs changing.

- Available in mill finish.
- Motorised or Manual
- Recommended maximum span 5.8 metres

Two fabric finishing options

The Zip system - allows for a tighter screen finish especially on larger screens or where clear PVC is used.

The new zip finishing system comprises of a 5 coil zip which can be welded or sewn to the screen material. This zip slides into a plastic extrusion channel that fits into the screen side channel. The zip and channel have been designed to work together to ensure smooth and taut travel when the screen is raised or lowered.

The Bip system - patented by LLAZA - is a chain system which is welded into a pocket.

Fabric Recommendations

Vistaweave PVC coated mesh - plain or striped

ReClear clear PVC
