

Care Instructions for Bradmill Outdoor Fabrics 10 373 200 XLP Superdux®

General Purpose Polyester/Cotton Utility Canvas

Stock Code CVBSD12

To obtain maximum life from Superdux® the following should be observed:

When used in any outdoor situations Superdux® should be kept clean by brushing regularly with a soft brush and hosing with cold water. Do not allow bird droppings, earth, sand or vegetable matter to remain in contact with the canvas.

Do not apply soaps, detergents or other cleaning fluids and keep petrol, kerosene and other similar solvents away from the canvas.

Ensure that the canvas is thoroughly dry before putting away.

Should mildew spots appear, brush them off before they become attached. Persistent mildew growth should be treated with a solution of one part White King® to three parts of lukewarm water, maximum temperature 38°C. Apply the diluted solution to the fabric with a stiff brush or broom and rinse off thoroughly after 15 minutes. Follow the safety directions outlined on the White King® containers.

To ensure that the water repellency is fully retained after continuous outdoor exposure, the fabric should be reproofed with a water repellent compound every 12 months or so. Bradmill Outdoor Fabrics' BrellaProof® reproofing compound is recommended for this purpose.
